

A COMPLETE INTRO TO TPLO

| Tibial Plateau Leveling Osteotomy |

OCTOBER 19 - 20, 2023

Translational Medicine Institute | Fort Collins, CO

Colorado State University Veterinary Continuing Education

You're experienced in bone plating, and you've treated your share of cruciate ligament ruptures with Extracapsular suture stabilization. You're wondering ... are you ready for TPLO? ... does it make sense for your patients who won't/can't accept a referral? There's only one way to find out ... come learn about the concepts, fundamentals and techniques of the TPLO. TPLO is a proven technique to treat the diseased cranial cruciate ligament in dogs of all sizes. TPLO stabilizes the stifle dynamically by eliminating cranial tibial thrust during weight-bearing. In this specially designed introductory course, you'll learn the rationale for TPLO and the fundamentals of the TPLO technique. You will perform stifle arthrotomy, meniscal treatment and TPLO using plastic bone models and cadaveric specimens. After this course, let us help you decide what "next steps" make sense for you and your practice. You should have a basic knowledge of stifle anatomy and experience with surgical approach to the stifle and bone plate application before attending this course.
